PROFESSIONAL SUMMARY

Software Engineer - Backend & distributed systems.

Backend engineer who designs and runs event-driven microservices and high-throughput data pipelines for a multi-country lending platform. Focus on dependable partner integrations, batch reconciliation, and observable production behavior, including high-volume ingestion (**1M+** records/month) and migration-heavy servicing workloads.

EXPERIENCE

- TymeX**
Software Engineer

Feb 2025 - Present

 - Designed **scalable, event-driven** architecture for a **multi-country** lending platform: **API-centric microservices** for **partner onboarding** and expansion, and **Datadog-based observability** for **high-throughput** servicing flows.
 - Delivered **partner data pipelines**: **Spring Boot** services ingesting **1M+** records/month from reporting feeds into **PostgreSQL** for **reconciliation** and **analytics**; **3 integrations** spanning **collections**, **fee**, and **mandate management**.
 - Built **mandate migration ETL pipeline** on **AWS (Glue, Lambda, SQS, Step Functions, S3)**: **batch-oriented**, auditable extraction, transformation, and load migrating **300k accounts** and **mandates** from a legacy loan book with **99.9%** integrity, enabling unified servicing.
 - Curated team **AI-assisted development** practices (**IDE** assistants, review conventions, documentation templates) to align safe, consistent adoption of coding assistants across the engineering workflow.
- Renasas Electronics**
Software Engineer

Aug 2023 - Feb 2025

 - Built **RBAC-backed REST APIs** for license monitoring and audit in a **distributed microservice** landscape; **Apache Kafka** and **Camunda BPMN** for orchestration and **reliable, asynchronous** processing.
 - Improved **latency** and **reliability**: **SSR** rollout and **data migration** tooling raised data accuracy by **20%**; reduced operational risk on large migrated datasets.
 - Owned **production REST services** sustaining **2TB-scale** workloads at **99% uptime**; **Terraform/Bash infrastructure as code** and **Docker-based** deployment and tuning for predictable **throughput**.
- Success Software Services**
Software Engineer

Apr 2023 - Jul 2023

 - Shipped **enterprise** features end-to-end (**Next.js, Spring Boot**) in **Agile Scrum**: UI through **RESTful API design**, schema changes, and release-ready delivery.
 - Delivered **REST APIs** and data layers supporting **e-commerce** and **ERP** workflows under production constraints; partnered on **performance** and correctness.
 - Raised **stability** and **scalability** by modernizing legacy paths and adding capabilities without regressions.

-
- PROJECTS / ACHIEVEMENTS
- RAG & LLMs**

Personal project

 - RAG** pipeline (**ingestion/chunking, embedding** retrieval, **vector store**); **LLM-integrated data preprocessing** and **synthetic data** generation; **Python** orchestration; prompt/**inference** tuning (local experimentation).
- Rux**
<https://github.com/nghien-ot/rux>

Open source

 - Declarative **type-safe HTTP client** for TypeScript (**zero runtime dependencies**); schema-driven request/response validation and typed path params; **Vitest** tests and **GitHub Actions** CI.

SKILLS	
Programming languages:	Java, SQL, Python, TypeScript
Distributed systems & backend:	Microservices, event-driven architecture, RESTful APIs, Spring Boot
Operating systems & containers:	Linux (deployment), Docker
Concurrency & messaging:	Apache Kafka, AWS SQS (async/event-driven integration)
Frontend:	Next.js, SSR
Cloud & AWS:	AWS Lambda, S3, SQS, Step Functions, IAM, CloudWatch
Data stores:	PostgreSQL, MySQL, Oracle DB
DevOps & IaC:	Terraform, IaC, Bash, NGINX, Kong Gateway, Datadog; Vitest, GitHub Actions
Applied ML (personal):	RAG, embeddings, vector retrieval, LLM orchestration, data preprocessing, synthetic data generation

EDUCATION & CERTIFICATES

University of Information and Technology, HCMVNU
B.S. Computer Science
Certificates: TOEIC 930/990

Ho Chi Minh
